SUMMARY

Backend Developer with 3+ years of experience developing highly scalable enterprise .NET applications, RESTful APIs, and Microservices. Proficient in advanced database management utilizing Microsoft SQL Server, PostgreSQL, and MongoDB, coupled with hands-on expertise in cloud architecture using AWS (Lambda, SQS, API Gateway, S3, RDS). Led end-to-end backend development lifecycles, optimizing complex queries to improve system performance by 40%, and maintaining 99.9% high-availability production environments. Completed Training for MongoDB Associate Developer Exam.

SKILLS

- **Programming Languages:** C#
- **Backend & Frameworks:** .NET, ASP.NET Core Web API, RESTful APIs, Microservices, Webhooks
- **Databases:** Microsoft SQL Server, PostgreSQL, MongoDB, Redis, MySQL
- **AWS Services:** EC2, Lambda, CloudWatch, Glue, SQS, API Gateway, Aurora, RDS, S3
- **Tools & Practices:** Visual Studio, SSMS, Postman, Jira, Git, GitHub, MongoDB Compass, CI/CD Pipelines, Dapper, SQL Server Agent Jobs, Deployment Automation

EXPERIENCE

Autovyn Consultancy Pvt. Ltd.

09/2023 – Present

Software Developer Engineer

Jaipur, India

- Designed and optimized scalable enterprise backend architectures utilizing .NET and SQL/NoSQL databases (MS SQL Server, PostgreSQL, MySQL, MongoDB), successfully supporting **50,000+ daily transactions**.
- Orchestrated the migration to Microservices architecture, optimizing complex SQL queries to reduce API response times by up to **40%**.
- Systematized core workflows by configuring SQL Server Agent jobs and scheduled messaging systems, successfully managing zero-downtime production deployments across **4+ active environments**.
- Architected the **Vehicle Health Card Blaster** module utilizing .NET, Kaleyra, Wrapper APIs, Webhooks, and AWS SQS for scalable messaging, successfully processing **500+ requests per minute**.
- Conceptualized and deployed the **Post Service Feedback (PSF) Blaster**, creating a robust queue-based bulk messaging system that seamlessly processes **over 100,000 high-volume requests daily**.
- Integrated Dealer **Post Service Feedback (PSF)** pipelines leveraging .NET, SQL Server, AWS Glue, and AWS Lambda for flawless data synchronization across **200+ dealerships**.
- Streamlined mission-critical database workflows, serving as the primary point of control for data integrity and system monitoring, reducing data discrepancies by **99%**.

Dunnfox Technologies

01/2023 – 09/2023

Software Developer Engineer

Jaipur, India

- Spearheaded core backend development initiatives, ensuring seamless third-party API integrations and highly efficient database management, accelerating data retrieval times by **30%**.
- Deployed robust, production-ready APIs supported by comprehensive unit testing (achieving **90%+ test coverage**) and detailed technical documentation.

PROJECTS

Maruti CRM Insurance Portal (msibplcrm.co.in)

Architected an enterprise CRM platform to centralize insurance workflows, enhancing customer relationship management and operational efficiency across **150+ dealerships**.

Service Marketing Reminder (dealercrm.co.in)

Constructed a self-executing customer reminder ecosystem to drive engagement, ensuring **100% reliable** and timely service follow-ups for **20,000+ customers**.

Vehicle Health Card Blaster

Programmed an autonomous messaging microservice utilizing .NET, Kaleyra, Webhooks, and AWS SQS to reliably deliver **10,000+ health reports weekly** at scale.

Post Service Feedback (PSF) Blaster & Dealer PSF

Developed a high-volume bulk messaging pipeline utilizing SQL Server Agent scheduling, AWS Glue, and Lambda to process and synchronize **100,000+ daily feedback streams**.

AutoVYN Connect

Built robust backend modules to streamline attendance tracking, leave management, and real-time HR reporting for a growing workforce of **5,000+ employees**.

ACHIEVEMENTS

- Reduced API response time by **40%** through strategic architectural shifts and rigorous SQL query optimizations.
- Improved database performance and system stability via advanced indexing strategies, reducing query latency by over **50%**.
- Successfully directed full backend deployment cycles, maintaining a **0% failure rate** across seamless production releases.
- Architected scalable queue-based messaging pipelines capable of processing high-volume data streams with **zero data loss**.
- Enhanced system security and proactive monitoring by implementing robust logging mechanisms, maintaining **99.9% uptime** for core backend services.

EDUCATION

- **Master of Computer Applications (MCA)** • Vivekananda Global University, Jaipur

CERTIFICATIONS

- **Training for MongoDB Associate Developer Exam**
- **AWS Community Day** • Participation Certificate
